

RACING ANGEBOT

DAINESE

DNA

PROTECTION TO DARE TO ADVOCATE AND DELIVER SAFETY IN DYNAMIC SPORTS

Dainese is dedicated to producing the most effective safety solutions in every arena where athletes continually push the human body and mind to surpass their prior achievements. From our motorcycle racing origins to alpine skiing, mountain biking, competitive sailing and outer space.

Our most recent achievements in a history of innovation include the world's first ultrarapid-deployment airbag suit and jacket systems for motorcycle racing and road use that don't require any vehicle-mounted sensors, the first performance suit for sailing yacht racing that combines flotation, protection and communication functions in a single solution, and a gravity load simulation suit for the International Space Station.

Like all our innovations, they've been developed in close collaboration with their pioneering users, designed around their needs to fully support their achievements. Or – to put it another way – they are inspired by humans.

Humans that include legendary multiple world-championship-winners Valentino Rossi and Giacomo Agostini, America's Cup champions Emirates Team New Zealand, astronauts Andreas Mogensen and Thomas Pesquet... and all our riders and athletes worldwide!

MEASUREMENTS

As it is not currently possible to industrially produce tailored back protectors, back protector must be worn by people with anthropometric characteristics lying within a certain range. A back protector is suitable for a person if its height does not exceed the seventh cervical vertebra and if the minimum area of the model is related to a waist shoulder height greater than or equal to that of the person.

CHOOSE THE SIZE OF A PROTECTOR CORRECTLY

The choice of the correct size of a back protector, according to the standard, is determined by the Waist-Shoulder height. This is the difference in height between the midpoint of the shoulder and the waistline (immediately above the hipbone). According to the Dainese standard, this measurement must then be qualified by the correct dimension of waist strap, identified by a size (ex: XS, S, M...). It is not correct to define the measure of the backprotector on the basis of the height of the person, because even if the back could have the same dimension, the legs could have a different lenght.
